

Maximize ROI and Accelerate Deployments for Salesforce with Flosum

Flosum is a comprehensive end-to-end DevSecOps platform with built-in version control, continuous deployments, static code analysis, branch management, analytics, and more. It offers a centralized repository for storing Salesforce metadata allowing developers to contribute changes, merge code, and manage releases seamlessly.

3x Faster Salesforce Deployments with Flosum

Gain significant return on your investment

With less than a 60-day payback period, the Flosum DevSecOps solution for Salesforce empowers enterprises by saving up to \$300K per month.

Up to 70% faster deployments

Automate and orchestrate deployments, achieve unprecedented developer efficiency, and gain visibility across the enterprise.

Easy to use with zero learning curve

Rated on G2 as the most user-friendly tool, Flosum exponentially increases deployment speed with an intuitive UI for visualizing changes, comparing versions, and rolling back changes.

Best-in-class support

24x7 support, success portal/certification courses, and a dedicated support team to manage the customer's cases.

Trusted and secure architecture*

As a fully native to the Salesforce platform, Flosum DevOps allows enterprises to meet stringent security standards like SOC, ISO 27001, and others.

Simplifying Salesforce Development and Deployment

With Flosum, teams can streamline their Salesforce development processes, reduce the risk of errors, and ensure that all stakeholders are on the same page.

100% native built-on Salesforce

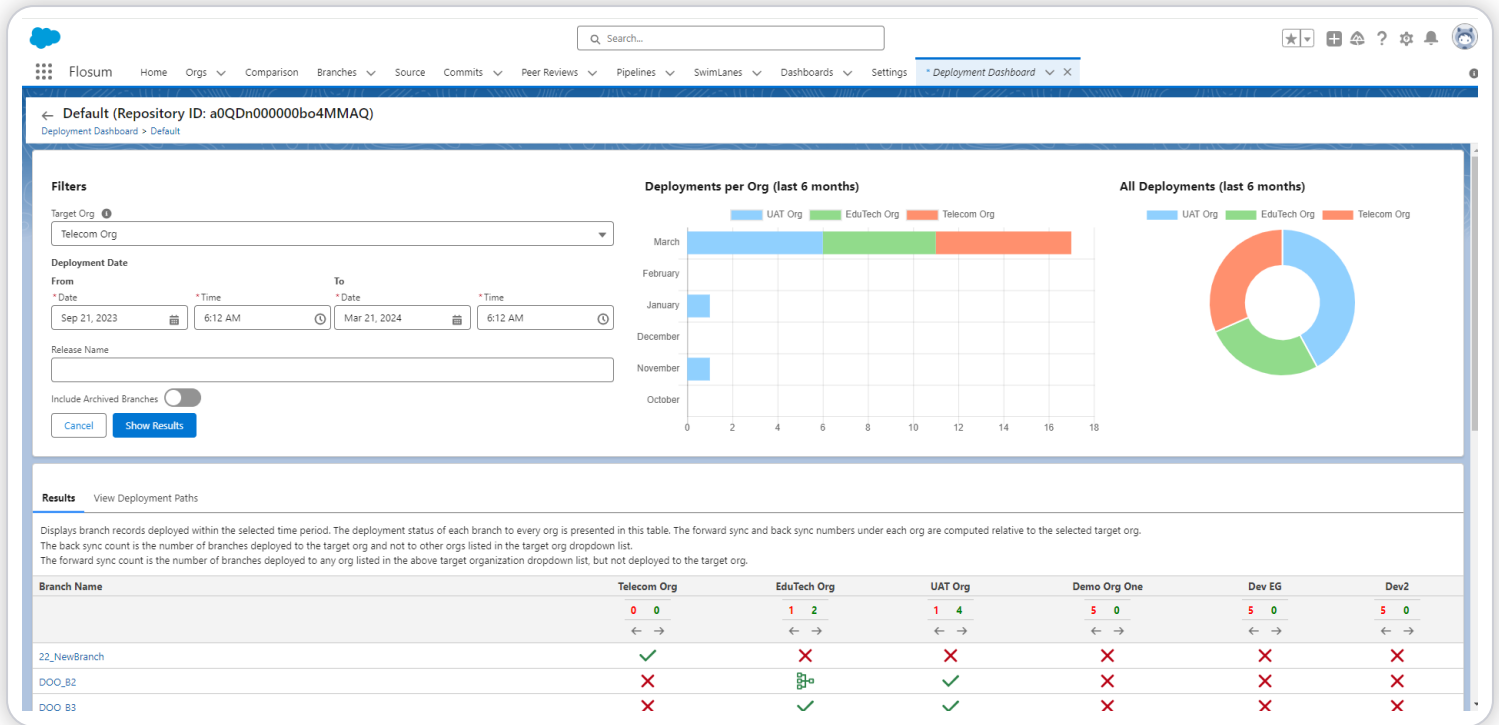

Flosum DevOps provides an intuitive and familiar interface similar to Salesforce. With a flexible and customizable UI, teams can customize their DevOps making it personalized for each organization.

“

Valpak is able to innovate its solution 3x faster than before with Flosum. It also allows us to move development changes through with complete confidence. Flosum fits into our data governance model by helping us maintain our test environments, simplify data migration, and by offering better visibility into release management across large-scale projects.

Timothy Haig, Solutions Architect, Valpak

*Other certifications include ISO 27001/27018, SSAE 16/ISAE 3402 SOC-1, SOC 2, SOC 3, PCI-DSS, TRUSTe Certified Privacy Seal, CSA STAR, and more.

Seamless Integration

Out-of-the-box integrations with market-leading tools such as Azure, Jira, Git, Bitbucket, and more. Supports integrations with leading Salesforce test automation platforms such as Provar, AccelQ, Selenium, etc.

Upgrade your Salesforce versioning

Designed specifically for Salesforce, Flosum is the only DevSecOps platform with native version control offering environment management, code merge, conflict resolution, etc. Flosum also supports bidirectional Git integration allowing real-time collaboration between Salesforce development and Git repositories.

Dynamic Pipelines

Automate deployment, validation, and rollback with easily configurable and reusable Dynamic Pipelines. This helps in increasing the frequency of releases and reducing rollback mistakes.

Intelligent conflict resolution and overwrite protection

Flosum's Impact Analysis detects potential overwrites allowing users to merge and resolve issues instantly. Semantic-based comparison minimizes conflicts to ensure smooth code deployment.

Strengthening Quality Assurance

Flosum offers multiple quality gates by integrating with Provar, Selenium, and other regression testing tools. Enhance quality through code reviews, code coverage, and scanning.

Reporting and Analytics

Built 100% Native to Salesforce, Flosum offers easy access to reports, dashboards, and KPI tracking along with detailed code tracking, version comparison, and change identification.

Why choose Flosum?

- ☑ Don't whittle away your money. Save up to 30% with a better solution.
- ☑ Our customers achieve 3x faster time to market.
- ☑ Get 24x7 dedicated support.
